100	LO	4,600	Trough Hatches, Gravity Gates, 3 Compartment	Grain	10442

## LET'S TALK RAILCARS

As we all know in the rail business, different commodities require different types of railcars. On the liquid and gas side of the equation we have tank cars. Based on the product, a car may need to be heated or kept cold. Some require unloading from the top, others from the bottom. Many, many years ago the railroads would use wooden vertical tanks that sat upon a flat car as means of hauling liquids. Since that time the primary focus for shipping liquids and gasses has been to design the tank to create a safer way to ship your commodity. Obviously the old wooden tanks were not the best design. Now we have horizontal tanks made from carbon steel, stainless steel and aluminum. They are designed to insure the commodities will not leak or spill. Most of the design improvements are based on experience and incidents. In other words, we have learned a lot from the past.

On the other side, we have dry commodities. Everything from wood chips, to baking flour to the lumber that builds our homes. They could require covered hoppers, box cars, flat cars, gondolas and so on. A gain, safety is the primary issue in the design and function of these cars. Many of these commodities can be shipped in more than one type of railcar based on how it is packaged. For instance, salt can be shipped in a covered hopper or, if bagged, in a box car.

TransMatrix, Inc. has years of experience in locating all the different varieties of railcars for each need. With our vast network of information we can help you locate that certain railcar.
