ANY	LO	5,250	Round Hatches, Pneumatic Gates	Plastic Pellets	10764
100+	LO	5,800	Round Hatches, Pneumatic Gates	Plastic Pellets	10625

### WHAT IS GOING ON?

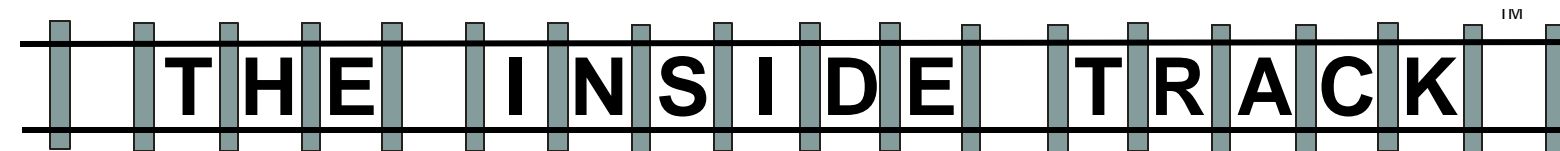

That is a very good question. What is going on? The demand for railcars is at an all time high. Customers need to move their product and they need to move it now. We haven't seen this much action in the rail industry since before 9/11. And it's not just one type of railcar or two, it's all of them. The tank car business is booming, the hopper car demand is outstanding and box cars, well, we haven't seen this many request for them in years.

A couple of things are contributing to this demand. To start, the economy is doing well. We are producing more materials for the building and construction industry. Interest rates are still low, causing businesses and individuals to look into buying property and constructing new facilities and homes. The metal market is on the rise as well. If you've had to scrap any of your railcars recently, you will have noticed that carbon steel, along with other metals, is now a valuable commodity. And that brings us to the other reason for the high market demand.

Many railcars are retiring, either due to age, mechanical reasons that are too cost prohibitive to repair, or we have worked them to death. The new car manufactures are doing what they can to keep up with the demand, but delivery times are extending. Couple that with, and I know we have all heard this, employment issues with the railroads. It's very rare to hear of an industry that has more job opportunities than they have potential employees. Seems quite a bit of the delays are caused by lack of man power. Lack of man power causes longer transportation time. And finally, longer transportation time causes transportation managers to look for ways to solve the problem. Answer, get more cars.

All in all, things will level out again. At this point, just hang on and enjoy the ride.
