ANY	LO	5,250	Round Hatches, Pneumatic Gates	Plastic Pellets	10764

SECURITY

Today we need to be much more aware of security in the Rail industry. If there is one thing that we learned from 9/11, it's that terrorists can strike any time or any place they want. It can be a really scary situation.

If you read the January issue of the Railway Age, you'll notice that they were staging a conference on Railroad security, January 31 through February 1, in Washington, DC. We are a little curious to see what, if anything, develops out of this conference to help our industry in the area of security. It's not going to be an easy chore, since most security agencies want to treat Rail security as they do Air Travel security. Obviously, that's never going to work!

Air Transportation has always been a much more controlled form of transportation than Rail. First of all, air passengers are processed through a controlled area with only one or maybe two doors to enter the plane. Rail passengers can usually enter through many entrances and often mingle with other passengers boarding or leaving, not only their train, but also trains at adjacent platforms. Also, planes usually fly from point A to point B, or possibly have one stop over. Trains make many stops between point A and B. There are also many more railroad stations than there are airports.

We definitely need better security in the Rail industry. Hopefully, we can all work together to come up with some solutions that will work for all parties involved. So let's see if anything comes out of this security conference, and then we can start talking about different security idea's to keep the trains running. Obviously, that's a good thing for all of us.
