#### U.S. STANDARD RAILROAD GAUGE Why Is It 4' - 8 1/2"? - Part II

Last issue we presented an interesting perspective on this topic by Professor Tom O'Hare. Today, we will present a bit more.

Mike Tuciarone replied to Professor Tom O'Hare's comments as follows:

Fascinating, I showed this to my wife, medieval studies major and horsewoman, who points out that the spacing of wheels on the Roman chariot was like as not dictated by the width of the yoke that attached the chariot to the horse, and the need to keep the wheel ruts well out of the path of the loose earth the hooves are kicking up.

Thus, the gauge of the Iron Horse might be in fact derived from the width of the standard Roman warhorse.

Tim Hill has a slightly different perspective:

I recall reading many years ago that, when asked to approve the standardization of the US railroad gauge, President Lincoln asked why it was such an odd number. Not satisfies with "gosh, I don't know, I guess 'cause that's the way they do it in England", Lincoln did a little research himself and learned about the Roman chariot ruts. The President didn't see this as sufficient reason for setting such a peculiar standard and proposed a 5'-0' gauge.

The beauraucracy got it's way.

An anonymous reply to Mr. Hill:

Well, the standard gauge was settled a few years after Lincoln's death. The "bureaucracy got its way" partly because forcing a change would have required rebuilding the rail-link across the Rockies. Widening the gauge (even by four inches) would have required widening ledges and tunnels that were hard to carve out of the mountains in the first place. As it was, at least one railroad managed to change something like 1,800 miles of track one Sunday.

It wasn't the bureaucracy, it was the railroads. Before the advent of the standard gauge, freight would be loaded into railroad cars at the factory, then transferred from one car to another every time it crossed from one railway to the next. The standard gauge allowed one car to go from origin to final destination without being unloaded.

Be looking for Part III..... Coming soon!
