A Hundred Years of Hard Work

Problems related to rail worker fatigue is a hot topic lately, and it should be. Rail safety should be a hot topic every day. Continued lack of proper rest not only impairs effectiveness, but do you really want an engineer or switchman less than aware of their surroundings? Or, worse yet, of a 10,000 ton freight train? Worker fatigue has been a main cause of rail accidents and undoubtedly has been a contributing factor in others.

Most often, work schedules have been blamed for fatigue, but inefficient use of rest times by workers is also cited. Many rail workers complain they have little time for the everyday tasks of life beyond working and sleeping. After all, somebody has to buy the groceries and take the kids for a haircut.

There are many factors combining to create this problem. The ever increasing tonnage of freight puts heavy pressure to move more and heavier trains. This in turn stresses the need for upgrades and rejuvenation of aging infrastructure, requiring increased manpower. Top that off with the fact that as the populace ages, more of that manpower is retiring. It is a vicious cycle and sorry to say it, but there's not much light at the end of the tunnel.

Obviously rail safety is imperative. The current hours of service standards have been in place since 1907. As we move into the next century every one will have to work together to create a system we can all live with... Safely.
