RAIL HISTORY JULY 4

Today, rail seems ubiquitous. It is hard to imagine a society without it. It was not that long ago that rail came on the scene, even for our country. Rail did not exist during the American Revolution. Our independence did not occur at all with the help of rail. Even rudimentary wheeled rail did not come about for nearly 20 more years when architect Charles Bullfinch used a type of cable car rail system with dump cars to level much of Beacon Hill in Boston.

Though there are no great stories of battles waged via rail in the defense of our great country, there are a few instances of rail history on July 4. The Grand Junction Railway, the world's first long distance railway, opened in 1837 between Birmingham and Liverpool England. A distance of 157 kilometers or about 97 miles. Hard to think of that as a long distance railway at this time.

In 1886, the first scheduled Canadian transcontinental train arrives in Port Moody, British Columbia. Now this was a long distance railway, covering 4,655 kilometers across Canada, from Montreal in the east all the way to the Pacific coast. Oddly the CP no longer reaches the Atlantic ocean.

Finally, and actually within the US, the first double decker electric streetcars in San Francisco began running in 1892 operated by the San Francisco and San Mateo Electric Railway.

Hope you all had a great Independence Day!
