ANY	LO	5,000+	Trough Hatches, Gravity Gates	Grain	13172

### THE FIRST STONE

In competition with the Chesapeake and Ohio Canal, the Baltimore and Ohio Railroad became the first chartered common carrier in U.S. History. Connecting the Great Lakes to the port of New York, the Erie Canal had already been in operation for two years. Baltimore's business community feared the loss of their prosperous western trade. To compete with the canals, they floated the idea of creating a 380 mile westward railroad to bring trade with the Ohio River Valley. Though greeted with much skepticism the Maryland General Assembly had granted the B&O Railroad a charter in February of 1827.

Initially the line was mostly wooden rails laid on stone. As such, construction began on July 4, 1828 with the laying of the First Stone. Much like an architect of a prestigious building placing a cornerstone to commemorate a grand beginning, the Baltimore and Ohio Railroad wanted to do the same. The First Stone was hollow and contained a copy of the railroad's charter and various newspapers of the day. During the ceremony, the last surviving signer of the Declaration of Independence, Charles Carroll said "I consider this among the most important acts of life, second only to my signing of the Declaration of Independence, if even second to that". On the same day, President John Quincy Adams, broke ground in a ceremony for the beginning of construction of the Chesapeake and Ohio Canal.

By 1852, the B&O had finally reached the Ohio River in what was then Wheeling, Virginia. West Virginia was not formed until 1863. In order to reach Wheeling, the B&O had constructed 11 tunnels and 113 bridges. It gained Chicago in November of 1874, amassing 811 miles of track. By the turn of the century it had constructed nearly 5,800 miles and connected Baltimore with Chicago, St. Louis, Philadelphia, Washington and New York. The B&O lived on until 1986 when it was merged with the Chessie and Seaboard Systems forming CSX Transportation.
